

# Diatom Flora of the Low Countries

## ***Achnantheidium delmontii* F. Pérès, R. Le Cohu et A. Barthès 2012**

### **Morphology**

Valves linear with rounded apices becoming elliptical in small individuals. RV: axial area narrow, central area irregular forming generally a rectangular fascia but a shortened stria can be present on one of the margin sides. Raphe filiform, straight, with distinct central pores. Striae are slightly radial. RLV: axial area needle-shaped. Striae are parallel to slightly radiate at the apices; mostly two striae are slightly more spaced apart in the middle part of the valve.

### **Morphometrics**

Source	Length (µm)	Width (µm)	Striae (in 10 µm)	
			RV	RLV
Own data (n=9)	14-21	4.1-4.8	20-24	18-21
Pérès, F. et al. 2012	7.3-21.4	3.3-5.1	20-26 up to 35 at apices	18-22 up to 25 at apices

### **Related species**

*Achnantheidium pfisteri* Lange–Bertalot (shorter 7-12 µm, lower striae density on RV 18-20 in 10 µm, central area is asymmetrical); *A. pyrenaicum* (F. Hustedt) H. Kobayasi (central area is asymmetrical with often a stria on one side, narrower 2.9-4.9 µm)

### **Distribution**

Several rivers in France, Danub Hungary. Rijn Lobith ponton, Maas Stevensweert aanlegsteiger, Hollandse IJssel Gouderak (NL).

### **Ecology**

Invasive species from eutrophic, alkaline rivers.

### **Ecological values**
